

FIPSA S - UNDERWATER ACTIVITIES AND FINSWIMMING SECTOR

DETAILED PROTOCOL FOR THE CONDUCT

OF THE INTERNATIONAL FINSWIMMING COMPETITION CALLED

“FINSWIMMING WORLD CUP”

BACKGROUND

This plan implements, with regard to overarching issues, the provisions of the documents known as: Prime Ministerial Decree of 11 June 2020 art. 1 letters e) and g), of the Law Decree 23 July 2021, n. 105, of the Law Decree 6 August 2021, n. 111, of the Law Decree 24 December 2021, n. 221, of the Law Decree 30 December 2021, n. 229, of the Law Decree 7 January 2022, n. 1 and of the Law Decree 4 February 2022, n. 5 and “**Guidelines for the organization of sporting events and competitions**”, drawn up by the Office for Sport of the Presidency of the Council of Ministers of the Italian State.

SCOPE

The purpose of this protocol is to allow the conduct of international finswimming competition called “Finswimming World Cup”, making the best effort to limit as much as possible the risk of contagion from Covid-19 during such competition.

This protocol forms an integral and substantial part of the regulations (CMAS International Regulations and Special Regulations) governing the conduct of the aforesaid competitions.

CHARACTERISTICS OF VIRAL AGENT SARS-CoV-2

Coronaviruses (CoV) are a family of respiratory viruses that cause mild to moderate severe illness. Other human coronaviruses of animal origin (zoonotic viruses) have been responsible for outbreaks of severe respiratory syndromes in the last twenty years, such as SARS (Severe Acute Respiratory Syndrome) in 2002/2003 and MERS (Middle Eastern Respiratory Syndrome) in 2012. They are defined “coronaviruses” for the crown-shaped tips that are present on their surface. Coronaviruses are common in many animal species (both domestic and wild) and can — as they are passed on to other animal species — infect humans.

In 2002, the SARS epidemic caused by SARS-CoV-1 virus broke out, followed by the MERS epidemic caused by MERS-CoV virus in 2012, both belonging to the Coronaviridae family, genus beta. In December 2019, a new zoonotic human coronavirus responsible for severe inflammatory pulmonary disease caused by SARS was identified. In the first half of February, the International Committee on Taxonomy of Viruses (ICTV) gave the new coronavirus the final name: “Severe Acute Respiratory Syndrome Coronavirus 2” (SARS-CoV-2). On 11 February 2020, the World Health Organization announced that the respiratory disease caused by the new coronavirus was named Covid-19.

HOW THE VIRUS IS TRANSMITTED

The new coronavirus is a highly contagious respiratory virus that spreads mainly through contact with respiratory droplets expelled by infected people through saliva, coughing, sneezing or just talking; direct personal contact; hands, e.g. touching the mouth, nose or eyes with contaminated hands. The virus is highly contagious. In rare cases, contagion can occur through faecal contamination. Heavy droplets normally manage to cover a space of no more than one metre before falling to the ground; this is why a distance of one metre is considered sufficient to prevent transmission. However, the significance of environmental factors must be taken into account.

The displacement of air caused by an athlete and/or following an opponent closely can increase the likelihood of droplet contamination over greater distances as compared to the established measure of social distancing. In these circumstances, the stronger the wind, the greater the distance required to ensure safe conditions. Normally, respiratory diseases are not passed on with food, which, however, must be handled in accordance with good hygiene practices.

According to currently available data, symptomatic people are the most frequent cause of virus spread. The WHO considers infection with a new coronavirus to be infrequent before symptoms develop, although there are numerous observations of transmission of the infection in the two days prior to the onset of symptoms. The incubation period ranges between 2 and 12 days, 14 days being the maximum precautionary limit. The most frequent route of transmission is the respiratory route, followed by surfaces contaminated with the hands and subsequent touching of the oral, nasal mucous membranes and conjunctivae.

SYMPTOMS

The most common symptoms of a coronavirus infection in humans include fever, coughing, difficulty in breathing. In the most severe cases, the infection can cause pneumonia, Acute Respiratory Distress Syndrome (ARDS), kidney failure and even death.

Common human coronaviruses usually cause mild to moderate upper respiratory tract diseases, such as the common cold, which last for a short period of time. Symptoms may include: rhinorrhoea (runny nose); migraine (headache); cough; pharyngitis (inflamed throat); fever; general feeling of discomfort; diarrhoea. Like other respiratory diseases, new coronavirus infection can cause mild symptoms such as rhinitis (cold), pharyngitis (sore throat), cough and fever, or more severe symptoms such as pneumonia, possibly involving very severe breathing difficulties.

A common symptom is anosmia (decrease/loss of the sense of smell) and ageusia (decrease/loss of the sense of taste), which seem to characterise many clinical conditions. In some cases, the infection can be fatal. The people most susceptible to severe forms include the elderly and those with pre-existing diseases. The most frequent pre-existing diseases detected in deceased persons include cardiovascular diseases, arterial hypertension, type 2 diabetes mellitus and chronic respiratory diseases, such as chronic obstructive pulmonary disease. Since the symptoms caused by the new coronavirus are non-specific and similar to those of the common cold and influenza virus, laboratory tests can be performed to confirm the diagnosis if contagion is suspected.

At present, the only test capable of establishing whether active infection has occurred, unless viral isolation by culture is relied upon, is the nasopharyngeal swab with Real Time-PCR (RT-PCR) detection of viral nucleic acid. Serological tests, according to WHO guidance, cannot replace the molecular diagnostic swab test, but can provide epidemiological data on viral circulation in the working population.

With regard to reliance on serological tests in health surveillance for the purpose of establishing fitness, those available at present are not sufficiently valid for such purpose. For this reason, at present, there are no indications for their use for both diagnostic and prognostic purposes in occupational contexts, let alone to establish an individual worker's fitness.

RISK ASSESSMENT CRITERIA WITH PARTICULAR REFERENCE TO THE SPORTS ENVIRONMENT

The criteria to be used for the assessment of the risk of transmission of the epidemiological contagion in the sports environment due to the presence of the coronavirus rest mainly on the:

- identification of the risk factors associated with the danger level of the virus;
- identification of the mechanisms of virus transmission by making reference to the scientific literature. In this connection, as an input for assessment, it is established that transmission occurs both by air and by contact;
- identification of the sources of possible contagion within the sports sites, taking into account the organisation of sites, work activities, sports activities and support for the purposes of such activities by accompanying persons;
- qualitative identification of the probability of transmission as a result of contacts between sports operators.

Following the risk assessment, a set of prevention and protection tools may be defined for risk management purposes. As a preliminary and essential stage to identify the prevention and protection measures to be adopted for the containment of the specific risk, an accurate analysis needs to be carried out in respect of the (i) activities performed on a sports facility by the staff, (ii) organisation of sports activities, and (iii) layout of a sports site.

To this end, the following steps are involved:

- analysing the organisation of sports and support activities;
- identifying sports and support activities that can be carried out through DL (Distance Learning) or remote working, the number of sports operators involved, presence of accompanying persons;
- identifying the paths for the sports operators identified as well as any accompanying persons;
- classifying sites and sports on the basis of the (i) number of people attending at the same time, (ii) type of physical activity carried out in terms of space, (iii) physical effort required of the athlete, (iv) peculiarity and ventilation of premises, time of attendance;
- analysing the layout of classified sites and sports;
- identifying the staff working outside the site, analysing paths and contacts with other people;
- establishing whether sports workers and/or operators are present at other sports sites;
- analysing the means of transport (public/private) and secondary risks;
- time schedule and review of emergency plans and procedures.

The employer/manager of the sports site/representative of the sports organisation, according to his/her own sports activity organisation plan, must — as a matter of priority — identify in-person activities to be performed:

- based on a single shift of activity/performance;
- based on several shifts of activity/performance;
- with restricted access by sports operators and/or accompanying persons;
- according to special procedures.

As part of one's own organisation, consideration must be given to the sports and support activities that can be performed remotely (through LD or remote working). Namely:

- delocalising, at least in part, the activities assigned, without the need for sports operators and/or accompanying persons to be present at all times at the sports site;
- organising the performance of sports and support activities in accordance with the goals being pursued and in an independent manner;
- relying on technological equipment suitable for the performance of sports and support activities outside the sports site;
- monitoring and evaluating the outcome of the activities assigned, in relation to the planned goals.

With regard to activities to be carried out at the sports site, the following actions need to be taken:

- considering rearranging such activities with the aim of reducing the number of sports operators (and/or accompanying persons) in attendance at the same time, i.e. consider whether it is possible to rearrange the tasks/activities so as to reduce their number consistent with any requirements set out by the specific sports discipline/sports organisation or technology, equipment and operating limits, considering the need to provide training over the very short term;
- dividing sports operators (and/or accompanying persons) — whose attendance is still deemed necessary even following any rearrangement — into groups that carry out the same activity/task at the same sites;
- establishing the risk per area in greater detail and the possible extent of the movements;
- ensuring the presence of a qualified sports coach;
- ensuring that the presence of athletes, trainees and other personnel in places where sports, motor or physical exercise activities take place is registered using a log or other solution, whether technological or otherwise;
- organising a system for the sanitisation and constant cleaning of the premises.

With respect to each sports operator, account must be taken of the most usual routes accessed within the same time bands, with particular reference to: entrance to the sports site; access to sports sites/areas; access to common areas and other places; access to changing rooms and toilets.

In the areas of specific competence, it is essential to ensure that thorough information is provided to sports site workers and all operators and, in general, to all individuals present at the sports site for various reasons, with respect to the contents of this document and the necessary arrangements made to ensure compliance with these provisions and protection of public health.

PREVENTION AND PROTECTION MEASURES

Prevention and protection measures are aimed at managing the risk of contagion within a sports site. They should be adopted on the basis of the specific sports characteristics that have been identified during the risk analysis phase, bearing in mind that prevention and protection measures should not be viewed as alternatives, but as minimum requirements for the containment of contagion in relation to the current epidemiological situation.

At present, the main contagion prevention measures recommended by the health authorities include distancing, hand hygiene (including by using sanitising solution dispensers), surface hygiene and the use of masks and visors to prevent droplets from being dispersed.

On the basis of the specific results of the analysis of sports organisations and of the risk assessment carried out, the following organisational, procedural and technical measures can be identified.

Managing entrance/exit at sport sites by sport operators and other individuals

- Encouraging staggered entry/exit times to avoid as much contact as possible in common areas (entrances, changing rooms, toilets, waiting rooms, areas dedicated to sports activities, refreshment areas, etc.).

Layout and route review

- According to specific needs, a new and different internal circulation approach should be adopted;
- points of entry into and points of exit from the facility should be differentiated, if possible;
- “anti-contagion” separating barriers should be installed in areas considered as critical due to direct contact;
- athletes’ resting places (e.g. poolside) should be considered;
- anti-doping room;
- for each place involved, simulation drills should be performed regarding the routes and flows of people moving between one place and another, so as to assess any inflow and outflow gatherings as well.

Managing symptomatic cases

- An isolation area should be created where individuals showing Covid 19-related symptoms during sports activities may be temporarily gathered;
- a procedure should be developed for handling sports operators, or other individuals present on the sports site, who show symptoms attributable to Covid-19 during sports activities.

Hygiene measures and practices

- Wash one’s hands frequently;
- wear the contagion prevention equipment prescribed for each situation/sport, depending on the intensity of physical exercise and the wearability of the equipment;
- maintain the minimum interpersonal distance appropriate to the motor movement, intensity of physical exercise and other mitigation measures available;
- avoid touching one’s eyes, nose and mouth with one’s hands at all times;
- sneeze and/or cough in a handkerchief avoiding hand contact with respiratory secretions; if a handkerchief is not available, then sneeze into the elbow;
- avoid leaving clothes worn for physical activity in places shared with others. Instead, store them in backpacks or personal bags and, once back home or at the hotel, wash them separately from other clothes;
- always drink from disposable glasses or personal bottles;
- immediately discard tissues or other (well sealed) materials used into appropriate containers;
- avoid eating food in the changing rooms.

Surgical masks

To afford adequate protection, surgical masks must comply with EN 14683:2019 standards. The application of these standards ensures that the surgical masks perform the following main functions:

- bacterial filtration efficiency: the tests set out in the standard ensure that any biological contaminants present in the sputum of the person wearing the mask (liquid particles) cannot pass through the filtering material of the mask;
- Breathability: this test is aimed at ensuring that the person wearing the mask can breathe through the fabric without too much effort. No requirements are set for the exhalation phase;
- biocompatibility: the purpose of this test is to ensure that the skin of the person wearing the mask will not experience irritative, toxic or allergenic consequences;
- cleanliness: the purpose of this test is to ensure that the material of which the mask is composed affords an adequate level of cleanliness, the mask being positioned on intact skin, close to the nose and mouth mucous membranes;

- wearability: the shape of the mask must allow it to be worn close to the nose, mouth and chin of the wearer, ensuring that the mask fits perfectly to the sides. No full adherence or face sealing properties are required.

Surgical masks will perform their protective function only if properly worn and changed frequently, typically every 4 hours or replaced when removed for eating or drinking.

MEASURES FOR FINSWIMMING COMPETITIONS

General measures

Considering that Finswimming takes place indoors, strict rules must be applied regarding the use of protective equipment and the utmost effort must be made to prevent situations that may frustrate compliance with an interpersonal safety distance of at least two meters. This applies to both poolside as well as other areas that are part of the facility (reception, etc.). Therefore, all the methods (e.g. shifts, staggered access, etc.) that allow the competitions to be held in conditions of absolute safety must be relied upon. In the areas outside the sports facility, the safety distance must be at least one meter. All those who take part, in whatever capacity, in the competitions (athletes, technicians, assistants, judges, organisational staff, officials, etc.) are required to wear a mask (**type Ffp2**) and not to consume food and drinks inside the sports facility.

Participants in the competitions must comply with the following rules:

- Obligation to stay at the hotel in the event of temperature (over 37.5°) or other flu symptoms (cough, breathing difficulties, etc.), informing the Federation physician or, in his/her absence, the accompanying manager thereof;
- Obligation to promptly notify the Federation physician or, in his/her absence, the accompanying manager — who will in turn inform the competition physician — of the onset of any influenza symptoms after entering the sports site or during the sports performance, ensuring that an appropriate distance is kept from the people present at the competition site;
- Adoption of precautionary measures to access the sports site and, in particular, during the sports performance, such as: maintaining a safe interpersonal distance; complying with the ban on gatherings; observing the rules governing hand hygiene; using the personal protection equipment provided (mask Ffp2);
- Signing and handing over to the organiser a self-declaration (attached at the foot of this protocol).

Athletes and assistants must make sure that each use their own equipment.

Special measures:

- **Presence of the public:** prohibited. Competitions must be held behind closed doors. The competitions will be broadcast in live streaming. The contact to view the live streaming will be communicated a few days before the start of the event.
- **Communications** — Communications will be delivered electronically. Before arriving in Lignano Sabbiadoro, each participating delegation will be required to provide (by email to cednuotopinnato@fipsas.it) one or two WhatsApp numbers both to receive all communications and information about the event and to send and receive any kind of document, avoiding contacts with other people. It is very likely that the technical meeting with the delegation heads will take place online.
- **Opening ceremony** — It must take place in an extremely sober manner and be limited to the strictly necessary institutional aspects. The opening ceremony will take place at the swimming pool. The opening ceremony will be broadcast live via streaming.
- **Volunteers and athletes' assistants** — Not allowed.
- **Carrying out events** — They will be held with a staggered entry per heat, with a start list

showing pool entry and competition start times. 25 minutes will elapse between heats to allow warm up in the 25-m pool and to get on the starting block without a roll call, according to the time schedule shown on the start list. There will be a one-way walkway, as shown in the photo, which means that once participants have left the 25-m pool, they will not be allowed to access it again after the event.

No athlete will be called before the start. A quick check will be carried out before the start. Showing up late will cause a participant to forfeit his qualifying event. As soon as the event is over, each athlete must leave the facility as quickly as possible, using the safety exits of the 50-m pool.

It's specified that the small warm up in the 25-m pool will be allowed only once before the first distance. In case of a possible 2nd race there will be no further warm-ups.

- **Coaches and accompanying persons authorised to enter the pool** — Only two coaches per club will be allowed to access the pool. Any other requests will be reviewed by the Organising Committee.
- **Start list and rankings** — They will be announced exclusively by electronic means.
- **Secretarial formalities** — Where secretarial formalities are required to be discharged in-person, each Delegation may rely exclusively on one single person for any such purpose, i.e. the Head of Delegation.
- **Closing ceremony** — Not contemplated.
- **Individual protection face mask** — Wearing a face mask (**type Ffp2**) will be mandatory for everyone up to the starting block.
- **Competition procedure** — The Organising Committee reserves the right to change the competition procedure once it has obtained the official start list.

MEASURES PUT IN PLACE BY THE ORGANISING COMMITTEE TO REDUCE THE RISK FACTORS OF COVID-19 INFECTION DURING THE CONDUCT OF THE EVENT

Health check at the entrance to the sports facility

- A number of health monitoring methods will be applied, including but not limited to, checking body temperature and ensuring that masks (**type Ffp2**) and other personal protective equipment are used;
- Anyone who has not been correctly identified in advance will not be allowed to access the sports facility;
- **Participants coming from Italy and San Marino must hold “reinforced” Covid-19**

green certificates, including:

- Anti-SARS-CoV-2 vaccination, at the end of the prescribed cycle;
- Recovery from Covid-19, with simultaneous termination of the prescribed isolation period following infection with SARS-CoV-2;
- **Participants coming from countries other than Italy and San Marino must, in accordance with the provisions of Annex 1:**
 - Complete, prior to entry into Italy, the Passenger Locator Form (to learn more, please view the following web page: <https://app.euplf.eu/#/>);
 - Undergo, within 48 hours of arrival in Italy, a rapid molecular or antigenic test and be able to produce the outcome certifying they tested negative for the SARS-CoV-2 virus.
 - Hold “reinforced” Covid-19 green certificates (or other equivalent certificates in one of the following languages: Italian, English, French, Spanish or German), including:
 - Anti-SARS-CoV-2 vaccination, at the end of the prescribed cycle (vaccines valid in Italy even if administered abroad are: vaccines for which the holder of the marketing authorization is the same as in the European Union (the list is attached); Covishield (Serum Institute of India), produced under license from AstraZeneca; R-CoVI (R-Pharm), manufactured under license from AstraZeneca; Covid-19 vaccine-recombinant (Fiocruz), manufactured under license from AstraZeneca). In the case of vaccinations with unauthorized vaccines or not as equivalent in Italy, access to the swimming pool, hotel and restaurant services is allowed after carrying out a rapid or molecular antigen test with a negative result for the SARS-CoV-2 virus having validity of 48 hours from execution if rapid antigenic or 72 hours if molecular. To holders of a certificate issued by the competent foreign health authorities of successful recovery or vaccination against SARS-CoV-2 with a vaccination authorized or recognized as equivalent in Italy, in the event that more than six months have passed since the completion of the vaccination cycle primary anti SARS-CoV-2 or from Covid-19 healing, access to the swimming pool, hotel and restaurant services is allowed after carrying out a rapid or molecular antigenic test with negative result for the SARS-CoV-2 virus, valid for 48 hours from execution if antigenic rapid or 72 hours if molecular;
 - Recovery from Covid-19, with simultaneous termination of the prescribed isolation period following infection with SARS-CoV-2;
- With a view to preventing epidemic outbreaks, should the relevant health authority issue additional measures, all participants in the event will be required to fully comply with such measures.

Logistical constraints

- In order to reduce the risk of Covid-19 infection as much as possible during the event, participating delegations will be required to stay in the Bella Italia Sports Village. In addition, it is highly recommended that all participants:
 - a) Remain inside the Village throughout the event, refraining from leaving the premises except in cases of extreme necessity;
 - b) Always keep the same place at the table during meals;
 - c) Avoid any kind of situation that might hinder compliance with the social distance of at least two metres inside the sports facility and at least one metre in all other areas.

Mandatory emergency plan

- Procedure for the safe management of a person who tests positive for Covid-19 or has a body temperature above 37.5°C and shows Covid-19 symptoms. This procedure includes (i) identifying a suitable place for isolation, (ii) selecting staff equipped with personal protective equipment to be used for contact with the infected or potentially infected person and, if necessary, (iii) request immediate action by healthcare personnel and implement the relevant protocols.

It is understood that the implementation of the relevant protocols shall not cause FIPSAS and the Organising Committee to incur any expense or any responsibility whatsoever.

Measures to be implemented after the emergency phase

- In the post-emergency phase, if a swab test is found to be positive, then cleaning, sanitation and disinfecting operations will be carried out in accordance with current legislation.

PROCEDURES FOR THE CONDUCT OF THE EVENT

- The Self-declaration under Articles 46 and 47 of Decree No. 445 of the President of the Italian Republic dated 28 December 2000 must be sent in advance by email to cednuotopinnato@fipsas.it and, if necessary, handed over during accreditation duly completed in all of its sections.
- The Self-declarations, duly filled in and signed, will be collected by the organiser's staff and stored for 14 days after receipt thereof; once this retention period has expired, the organiser will arrange for them to be disposed of in compliance with privacy regulations.
- Gatherings shall be forbidden and particular care must be taken near the entrances to the operational areas.
- Appropriate signs will help participants move around and correctly identify the route to the relevant areas.
- Information posters containing operational anti-infection safety measures will be displayed.
- All the staff in charge and all the participants will be promptly informed of the requirements set out in this Protocol, which shall apply without exception.

ANTIGENIC TEST

Should anyone need to undergo a second-generation rapid antigenic or molecular (swab) test, they may do so at the sample collection centre of FRIULI CORAM, located in Via Tarvisio, 5/B ext. 2 - Lignano Sabbiadoro (Udine), on any day, from 08.00hrs to 14.00hrs, only by appointment. The request, which must be sent by email to lignano@coram.it within 14 March, must specify the type of test being requested, the names and telephone numbers of the persons for whom such test is requested and the time the test is to be performed. The second-generation rapid antigen test costs around € 20.00 (the report is issued on paper in about 20 minutes, the Green Certificate is issued within the day), while the molecular test costs around € 90.00 (the report and Green Certificate are issued within the day). The costs are to be settled directly on site.

IMPORTANT: The provisions contained in this Protocol reflect the current Italian regulatory framework. Should the latter change, the Protocol will be amended accordingly.

SELF-DECLARATION PURSUANT TO ARTICLES 46 AND 47 OF PRESIDENTIAL DECREE NO. 445/2000

I, the undersigned _____, born in _____ on _____, personal identification card No. _____, a member of the _____ Delegation, being aware that anyone making false declarations shall be punished under the Italian Criminal Code and the Italian Special Laws governing such matters (Article 46/47 of Presidential Decree 445/2000),

hereby declare, on my own responsibility that:

I have had COVID-19 and, if answering yes, I am in possession of a certificate of recovery dated _____ and a competitive sport fitness certificate or certificate of return to competitive activity, dated _____	YES	NO
I have been subjected to quarantine measures	YES	NO
on the date of signing this self-declaration I have symptoms attributable to the COVID-19 infection (fever, cough, breathing difficulties, etc.) or other flu-like symptoms, and I am aware that I will not be able to access the sporting venue unless I am in possession a certificate of recovery and a certificate of competitive sport fitness or certificate of return to competitive activity	YES	NO
I have been exposed to proven, likely or suspected cases of COVID-19 in the past 14 days, and indicate here the date of the final day of voluntary self-isolation _____	YES	NO
to have been subjected to vaccination against COVID-19 with a number of doses equal to and, if so, to show the relative certification issued by the National Health Service	YES	NO
to have received timely information from FIPSAS staff or from the appointed sports club about the covid-19 prevention protocols and the rules of conduct.	YES	NO
to have carried out a rapid molecular or antigenic swab with negative results in the last 48 hours, for which the relative report is presented	YES	NO

I am aware that:

- in case I have been affected by COVID-19, I will not be able to access the sporting venue unless I am in possession of a certificate of recovery from Covid-19 and a certificate of competitive sport fitness or certificate of return to competitive activity;
- in case I have not been affected by Covid-19 and, therefore, have not a certificate of recovery, I will not be able to access the sporting venue unless I am in possession of a certificate of anti-SARS-CoV-2 vaccination at the end of the prescribed cycle (in the case of vaccinations with unauthorized vaccines or not as equivalent in Italy, access to the swimming pool, hotel and restaurant services is allowed after carrying out a rapid or molecular antigen test with a negative result for the SARS-CoV-2 virus having validity of 48 hours from execution if rapid antigenic or 72 hours if molecular).

I undertake to inform the Federation physician and, in his/her absence, the accompanying manager and to refrain from showing up at the sports site in case of:

- I have a temperature above 37.5°;
- I have been exposed to proven, likely or suspected cases of COVID-19;
- I have any related symptoms (cough, cold, sore throat, difficulty breathing, shortness of breath, fatigue and muscle pain, abdominal pain, diarrhoea, loss of taste and/or smell).

I undertake to take appropriate measures to reduce the risk of COVID-19 contagion in accordance with the health recommendations of which I the undersigned am aware. For an event taking place in a sports facility, I hereby **authorize** officials to measure my body temperature every time I enter the aforementioned facility, for the purpose of preventing COVID-19 contagion.

I declare that I participate in the activity as an athlete technician companion manager spontaneously and on a voluntary basis and therefore I indemnify and exonerate from any and all responsibility the organizing sports Club, FIPSAS and its employees, officers or agents from any case of contagion from Covid-19 that should occur following participation in the activity in question.

I also declare that I have read the “Detailed protocol for the conduct of the international finswimming competition called Finswimming World Cup” adopted by FIPSAS - Underwater Activities and Finswimming Sector.

Place and date _____

Declarant's signature _____

Parent's signature (if the declarant is a minor)_____

The above information will be processed in accordance with Regulation EU 2016/679 (General Data Protection Regulation) for Covid-19 prevention purposes.

By signing this letter, the data subject represents that he/she has read and accepts the disclosure pursuant to Articles 13 and 14 of Regulation (EU) 2016/679 as provided herebelow.

DISCLOSURE

pursuant to Articles 13 and 14 of Regulation (EU) 2016/679 (hereinafter the “GDPR”)

Dear Sir/Madam,

This is to inform you that FIPSAS, in its capacity as Data Controller, will — for the purposes and with the methods described below — process the personal data provided by you in the course of the sports activity performed at the sports site during the period of COVID-19 epidemiological emergency management.

More specifically, FIPSAS will process the following personal data:

- a) Personal details and individually identifiable information;
- b) Data relating to possible SARS-CoV-2 infection;
- c) Data relating to detecting the state of health (body temperature check, verification of possession and validity of the “reinforced” green pass or other equivalent certification in one of the following languages: Italian, English, French, Spanish and German).

1. Purposes of processing and legal basis

The processing of the aforesaid data is necessary for COVID-19 contagion prevention purposes, in pursuance of the Article 6 paragraph 1 letter c of the GDPR, of the Article 9 paragraph 2 letter b of the GDPR and of the “Detailed protocol for the conduct of the international finswimming competition called Finswimming World Cup” adopted by FIPSAS - Underwater Activities and Finswimming Sector.

2. Processing method

The processing of your personal data will be carried out through the operations set out in Article 4 n. 2) of the GDPR, with reliance being made also on electronic means.

Information relating to your body temperature will not be subject to registration except in the case in which this reading is higher than 37.5 ° and only when it is necessary to document the reasons that prevented access to the places already mentioned.

The green certification (electronic and/or paper-based) will be checked using the official application "Verifica C-19" developed by the Ministry of Health through SOGEI. For more information, please follow this link: <https://www.dgc.gov.it/web/faq.html#verifica19>

The app is installed on the mobile device used by the personnel appointed by the Owner to perform checks in order to grant access to the sports site and allows designated operators to check the validity and authenticity of the COVID-19 Green Certificate — produced in Italy by the "DGC" national platform of the Ministry of Health, as well as the "EU Digital COVID Certificates" issued by the other member states of the European Union — by scanning the QR code shown on the Green Certificate. Once the information contained in the COVID-19 Green Certificate or the "EU Digital COVID Certificate" has been decoded, using the certificate's public signing key, the app will show the main details contained therein, such as first name, last name and date of birth of the certificate holder; certificate validity (checked against the dates contained therein and against the rules in force in Italy for "COVID-19 Green Certificates"). The QR Code shall not disclose the health-related event that generated the Green Certification and the only personal information that can be viewed by the operator shall include such details as may be necessary to ensure that the identity of the person matches that of the certification holder. Persons exempt from the vaccination campaign on the basis of appropriate medical certification issued in accordance with the criteria defined in the Ministry of Health Circular Letter shall not be required to hold and show the “Reinforced” Green Certificate.

3. Obligation to provide your personal data

Providing your data for the purposes listed under 1 is strictly necessary for the pursuit of the purposes listed above. Should you refuse to provide your data, you will not be allowed to access the sports site.

4. Recipients of the data

The personal data referred to under (a), (b) and (c) will be processed only by FIPSAS staff and will not be disclosed to third parties unless so required by specific regulatory provisions (e.g. if a request is submitted by the Health Authority to reconstruct the chain of any “close contacts” of a participant who tested positive for COVID-19 during the event).

5. Transferring your data abroad

Your data will not be transferred outside the EU.

6. Data retention time

Your data will be stored for the period of time strictly necessary to pursue the purposes for which they were acquired and in accordance with the specific provisions of the applicable law and, in any case, until the end of the state of emergency.

The data relating to the verification of the “reinforced” green certification, nor those relating to the exemption certification will be kept.

7. Data Controller

FIPSAS

Viale Tiziano, 70 – 00196 Rome

8. Data subject rights

You may at any time enquire about your personal data, be informed how they are collected, check if they accurate, complete, up to date and stored as required, and request their rectification or erasure under Articles 16 and 17 of the GDPR. Pursuant to Article 21 of the GDPR, you will have the right to object, in whole or in part, to the processing of your data for reasons related to your personal situation. These rights may be exercised by submitting a specific request — including, if you so wish, by using the form provided by the Personal Data Protection Authority, which may be downloaded at www.garanteprivacy.it — to be sent by registered letter or certified email (PEC). The data subject will also have the right to lodge a complaint with the Personal Data Protection Authority.
